ABSTRACT OF THE DISCLOSURE

An object is to implement timely service provision or information provision better suited for users, while decreasing efforts to construct link information or affiliation relation prepared for linkage with many service providers (or information providers), for both the service providers (or information providers) and users. In a system allowing a user to obtain information about a commodity included in a ticket correlated with a desired ID (identifier), information about a service, access method information retrieved based on storage location information of a procedure file included in the ticket, and service provision content information acquired based on an access address to a service provider included in the ticket, the ticket is allowed to contain information for deriving another ID different from the aforementioned ID, and a search for a ticket is repeatedly carried out by deriving a different ID on the basis of information obtained from a ticket correlated with the ID submitted by the user and using the different ID as a new search key.
